

Press Release

Significant High Grade Gold Results Cables Prospect 7th April 2008

Aragon Resources is pleased to announce that it has received excellent preliminary results from its first five holes in its first RC drill program currently underway at the Cables and Mission Prospects located approximately 7km north of the 3 million ounce Darlot Gold Mine in the Eastern Goldfields of Western Australia.

Initial gold results received from the reverse circulation (RC) drill program at the Cables Gold Prospect has returned the following significant high grades:

- **7m @ 27.02 g/t Au, from 133m**
- **2m @ 7.71 g/t Au, from 122m**
- **2m @ 73.95 g/t Au, from 80m**

The intercepts represent primary mineralisation within a dolerite host and indicates the prospect has significant potential for a primary gold discovery.

The current RC drill program is testing gold targets derived from the Sub Audio Magnetic Geophysical Survey conducted in October 2007 and to test the significance of the wide-spaced gold anomalism outlined in Aragon's reconnaissance aircore drilling conducted in January 2008. The current planned RC program over both the Mission and Cables Prospects consists of 27 holes and approximately 5,000 metres.

The following table provides more detail on the intercepts received from the first five drill holes of the planned 27 hole program:

Hole ID	Northing	Easting	From (m)	To (m)	Au g/t	Intersection
ADRC22	6923110	328184	60	64	4.32	4m composite sample
			133	134	12.5	7m @ 27.02 g/t
			134	135	11.7	
			135	136	32.6	
			136	137	76.4	
			137	138	53.2	
			138	139	1.7	
			139	140	1.04	
ADRC23	6923110	328208	122	123	3.12	2m @ 7.71 g/t
			123	124	12.3	
ADRC26	6923058	328208	115	116	1.98	3m @ 1.5 g/t
			116	117	1.52	
			117	118	1	
ADRC27	6923058	328250	59	60	1.07	2m @ 0.85 g/t
			60	61	0.63	
			76	80	1.69	4m composite sample
			80	81	101	2m @ 73.8 g/t
			81	82	46.6	

Reported intervals are calculated using a 0.5g/t lower cutoff with no upper cut and up to 1m of internal dilution. All holes orientated -60/270. Grid is Map Grid Australia 1994 Zone 51. Samples assayed by fire assay / AAS finish (Kalassay Leonora). The intercept widths are down hole lengths and may not reflect true mineralisation widths.

The information in this report that relates to exploration, mineral resources or ore reserves is based on information compiled by Mr Christopher Bryans (B.App.Sc.) who is a full time employee of Aragon Resources Ltd, is a member of the AusIMM. Mr Bryans has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a competent person as described by the 2004 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Mr Bryans consents to the inclusion in this report of the matters based on his information in the form and context in which it appears.
